East Central Railway

S&T Policy Circular No.-9

Sub: Procurement of Sliding Booms through works contract.

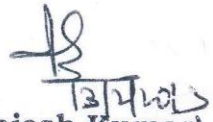

Sliding boom is provided at interlocked LC Gates for operational need and also for road safety enhancement.

Sliding booms at interlocked gates have been appreciated and reduces detention to trains. Target of Sliding booms have been increased and Railway has to install Sliding booms at all interlocked gates of A, B, D Spl. & main routes of E route.

But procurement of Sliding booms from Signal workshop is very slow and will not be able to meet the target.

In order to expedite commissioning of large numbers of Sliding booms, it has been decided that Sliding booms may be procured through works contract.

This issue with the approval of CSTE/ECR.
