Pr. Chief Operations Managers
All Zonal Railways

Sub: Picking up of arrival departure time at station by data logger.

With reference to above subject, a large no. of references are received from zonal railways for picking up of arrival/departure time at station by data logger. The issue was referred to Railway Board after compilation of suggestions received from various zonal railways. It has been decided by Railway Board that the logic to be built in data logger for picking up timings of trains to be fed in COA should be as below-

1. For train arrival: Occupation of berthing track of Platform concerned
2. For train departure: Occupation of track circuit of starter signal.

Divisions may modify the general scheme outlined above to take care of differing station layout.

Further, 3 (three) minute cushion at inter change points for arrival/departure/through run for the purpose of calculation of punctuality will be provided through ICMS.
